

"Ag + Science = STEM"

Teacher Presentation

PreK– Grade 4 & Homeschool Educators

Discover the science of agriculture and instantly integrate STEM into your lessons. Making STEM relevant to everyday can easily begin with helping young students understand where their food comes from. Ohio Science Standards for K through 4th grade have been used to create lessons/activities that promote an understanding of agriculture that will also help children learn the challenges we face globally in creating a sustainable world that makes sure all people get enough to eat.

**Thursday,
August 9, 2018**

Henry County Ag Hall

(behind the Beef Stand)
